

## QUALITY POLICY

Customer satisfaction is our primary objective.

We are leaders in the design and manufacture of static induction equipment.

Our scope of work includes design, manufacture and testing of static induction equipment ranging from cast resin dry type transformers up to 30 MVA, and 72 kV; oil cooled transformers up to 30 MVA, 72kV; open winding and cast resin dry type transformers; rectifier transformers; auto-transformers; furnace transformers; testing transformers; motor starting auto-transformers and reactors up to 30 kA, 72 kV.

Meeting customer commercial terms and technical specifications are important aspects upon which our quality management system has been developed and implemented.

Our aim is to ensure the highest level of quality, reliability and safety at the lowest practicable cost. We strive to exceed customer expectations. A framework for setting quality objectives is established and monitored for ensuring their satisfactory outcome.

As we firmly believe that quality is the responsibility of all personnel, we will continue to foster an environment of trust, respect, participation and recognition through education and training.

Our suppliers are recognised as an integral part of our business. They are selected on their ability to provide goods and services that satisfy our specific requirements and complement our quality management system objectives.

We are committed to complying with, and continually improving, the quality management system based on ISO 9001.
